What are journals?
Journals are usually published on a regular basis, such as weekly, monthly, bimonthly, quarterly. Each issue contains a collection of articles by different authors usually reporting the latest research. The journals which we subscribe to at Swansea are usually scholarly journals (sometimes called peer-reviewed journals or refereed journals). This means that an editorial board of experts in that field will examine an article before they allow it to be published in their journal. In particular they will look at the methodology to ensure the research is robust.

Finding journals in the library
If you are interested in a particular journal you can use iFind, the library catalogue (http://ifind.swansea.ac.uk/) to see if we subscribe to that journal.

When searching for a journal use either the Books & more or Everything search options.
- Search for the journal title.
- If it does not appear towards the top of your results use the Resource Type filter to limit your results to Journals.

Some journals are available in print, some online and some in both formats. iFind will always tell you what format is available for a particular journal and which years we have access to.

If a journal is available in print, make a note of the Call Number, that will enable you to locate the journal in the Library. For example the Call Number for Child & Family Social Work is HV1.C33.

In the Singleton Park Library the most recent journal issues and the older ones will be shelved downstairs on Level 1 or Level 2 near the books on the same subject.
Click **Online** to view the e-journal. To access any of our electronic journals, books or databases you will need to use your Swansea University username and password.

<table>
<thead>
<tr>
<th>What is my Swansea University username and password?</th>
</tr>
</thead>
<tbody>
<tr>
<td>Your username is your 6-digit student number and your password is your 6-digit student number followed by date of birth eg: 123456/03/04/1986 (unless you have changed this yourself).</td>
</tr>
</tbody>
</table>

**Finding journal articles**

iFind searches the vast majority of articles provided by the library. You can search for a specific article or articles on a subject.

A reference to a journal article will look like this:

If you have the full reference for a journal article (as above) you can use **iFind**, the library catalogue to find the journal article, e.g.

- Use either the **Articles & more** or **Everything** search options.
- Search for the title of the article
- To view the full article click on **Online**. If you have not already logged in you will be asked to do so after clicking on this link.
- Clicking on **Details** takes you to more information, which often includes a description or abstract.
- Select **Recommendations** to see other articles that have been accessed by people that have viewed the article you have found.
- Click on **Library** to check if the library holds print copies of the journal in which that article is published.
- **Times Cited** links to Web of Science that will list other, more recent, work that references the article.
Finding information on a Subject
You can use any of the search options to search for information on a topic. If you want to find all information regardless of whether it is in books or articles etc. use the **Everything** search.
- Search for your subject. Think about the search terms or keywords that you use. Tips on effective keyword searching can be found using the help tab.

The **Advanced Search** allows you to combine search terms and limit your search to a specific date or material type.

![Advanced Search Example](image)

Library Guides
To access **Library Guides** go to [http://libguides.swansea.ac.uk](http://libguides.swansea.ac.uk)

**Choose your subject area.** The example below shows the Library Guide for Social Work. There is a tab for Journals & Journal articles where you can view a list of the key journals in that subject.

![Library Guide Example](image)

Databases
Each subject area on **Library Guides** will suggest which database is the best for you to use for your topic. You can use databases when you want to see if there are any articles written about the topic you are researching. There are quite a few to use and some may overlap each other. Guides to all of our databases are available next to the resource in Library Guides.
